# **KPSI 342**

- Submersible level transducer
- Small bore, 0.75" diameter
- ±0.25% TEB static accuracy
- Withstands Temperatures to 85°C
- ASIC Technology Digital accuracy with analog output
- Two year warranty

The KPSI 342 is a small bore submersible hydrostatic level transducer that combines sensor competencies with the latest in Application Specific Integrated Circuit (ASIC) technology. Implementation of the ASIC provides unmatched sensor temperature compensation over the entire operating range of the pressure sensor. The Total Error Band specification (±0.25% FS) over the complete operating temperature range (-20 to 85°C) eliminates the user having to combine multiple performance specifications to understand the total accuracy of the transducer.

Every KPSI Transducer utilizes a highly accurate pressure sensor assembly specifically designed for hostile fluids and gases. The assembly is integrated with supporting electronics in a durable waterproof housing constructed of 316 stainless steel or titanium. The attached electrical cable is custom manufactured and includes para-aramid synthetic fiber members to prevent errors due to cable elongation, and a unique water block feature that self-seals in the event of accidental cuts to the cable. Each vented reference transducer is shipped with our SuperDry Vent Filter that prevents moisture from entering the vent tube for at least one year without maintenance, even in the most humid environments.

### Ordering Information

Notes: 1 The part number requires two level range limits, corresponding to the maximum and minimum analog outputs of the transducer, to be specified in pounds per square inch (psi) to three decimal places. The lower level range is typically 000.000 unless otherwise required. For reverse output requirements, enter the lower level range for the maximum output signal and the upper range for the minimum output. Use the following conversion factors: Ft. H<sub>2</sub>O / 2.3073 = psi // m H<sub>2</sub>O / 0.703265 = psi Examples: 10 ft. H<sub>2</sub>O / 2.3073 = 4.334 psi (Enter 004.334 in the part number), 10 m H<sub>2</sub>O / 0.703265 = 14.219 psi (Enter 014.219 in the part number) For sealed gage reference add local atmosphere when converting to psi. Contact PSI for assistance. Example:10 ft. H<sub>2</sub>O / 2.3073 + 14.7 = 19.034 psi (Enter 019.034 in the part number)
